

Quality Assurance and Testing Services

- Providence is a well-established software and information technology service delivery company
- A strong focus on quality
- Drivers of innovation on concepts, quality, and customer value creation
- Serving numerous satisfied clients in the UK, USA, Netherlands, South Africa, India, Germany, and Australia

Our Quality Assurance & Testing Services

Our focus is on client satisfaction and high quality software products, hence Software Quality Assurance and Testing plays a critical role in Providence's process framework.

Quality assurance expedites time to market, reduces costs, provides high quality deliverables, and ensures higher levels of confidence. As an integral part of the process, testing is a critical aspect that reduces business costs enormously as defects found early are far easier to fix rather than post implementation where business operations may be affected.

The Providence QA team is fully equipped with world-class QA tools and processes along with the latest knowledge in the area to completely understand the business objectives, technical, quality and functional requirements, in addition to the strategic aims of the clients' project.

Providence provides Quality Assurance/ Testing Services in both functional and non functional testing services to its clients. Below are some of the testing services offered:

Functional Testing

- Systems Testing
- User Acceptance Testing
- Regression Testing
- Unit Testing
- Integration Testing

Non-Functional Testing

- Performance Testing
- Load Testing

QA/Test Process Management

Providence uses a stringent process in ensuring all our services are effectively delivered with high quality using our proven ISO processes and the QA process management below.

The process is used in ensuring both our internal standards and customer objectives are effectively managed.
